

CONDOR COUNTRY CONSULTING, INC.

Project Owner: Santa Clara Valley
Water District 

Client: 
BROSAMER INC.

Services: Biological services for Lower Silver Creek Flood Protection & Creek Restoration Project

Description: CCCI conducted biological monitoring for a project designed to improve flood protection, wetlands, and wildlife habitat along Lower Silver Creek in San Jose, California. CCCI's multi-year biological monitoring included pre-construction surveys for nesting migratory birds and the western pond turtle, mapping and establishing protective buffer zones around active nests, and weekly monitoring of breeding bird nests, turtles, and nest exclusion devices.

CCCI also recommended when and where vegetation should be trimmed, and where nesting exclusion devices should be installed to prevent birds from nesting so close to the project site that construction might be affected. Staff submitted monthly reports to the client, which were then forwarded to the Santa Clara Valley Water District.
